

BR-SYSTEMS · ENGLISH EDITION

Cybersecurity and NIS2 for SMEs

Translate regulatory pressure into governance, risk and operational improvements.

Personally accountable · clearly documented · vendor-transparent

From concern to an owned action plan

This guide is designed for small and medium-sized organisations that need practical decisions rather than generic fear or a product-first answer.

How to use it

Work through the actions with the people who own the affected business processes. Mark what is already evidenced, assign an owner to every gap and agree a realistic review date.

Decision principles

01	Start from business impact and responsibility.
02	Prefer written evidence over assumed status.
03	Keep alternatives and exit paths visible.
04	Test recovery and operating processes, not only settings.

Important

This publication provides technical orientation. It is not legal advice, a certification or a guarantee of security. Current law, contracts, manufacturer documentation and the organisation's specific risk context remain authoritative.

Practical action checklist

Use the right-hand side of a printed copy for owner, evidence and due date.

01	Determine whether the organisation and its services may be in scope.
02	Document management responsibility and decision paths.
03	Assess risks across systems, suppliers and business continuity.
04	Strengthen incident handling and evidence retention.
05	Set realistic reporting and escalation procedures.
06	Manage identities, patching, backups and cryptography as processes.
07	Include supply-chain risks in contracts and reviews.
08	Train decision-makers and staff for their respective roles.
09	Keep evidence that measures are implemented and reviewed.
10	Obtain legal advice for binding applicability and reporting duties.

A sensible next step

BR-Systems can help establish the baseline, prioritise the gaps and implement or operate the agreed measures. A short initial consultation is enough to determine whether that would be useful.
